"Life 100"

With Insulin and Jamie

2nd Feb 2020 - 2 pm Sunday

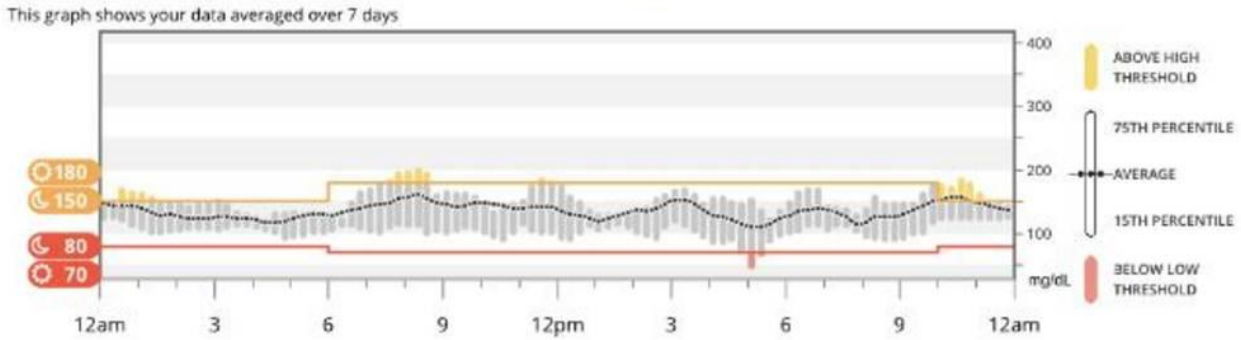

@ Samatvam Jnana Sanjeevini
JP Nagar, Bangalore

My name is Jamie Kurtzig, and I am a high school student living with type 1 diabetes (T1D). I was diagnosed with T1D when I was one year old, and I have been working towards a cure ever since. I am so hopeful about T1D's future because the Loop has helped to make my life so much easier!

My quality of life has been dramatically better on Loop relative to the pump I used to have, and I now spend only a quarter of the time I used to managing my diabetes!

We asked Jamie Kurtzig what advice she would give to families with diabetes. She answered with a single word: **"hope."** Read the inspiration behind Jamie's newly published book, Onederland: My Childhood with Type 1 Diabetes.

Ms Jamie Kurtzig

Artificial Pancreas: Loop is an automated insulin delivery (AID) or 'closed loop' device that automatically doses insulin, based on glucose readings from a continuous glucose monitor. AID devices are a new technology that can greatly improve glucose control and quality of life for anyone who takes mealtime insulin.
